

Intelligent Buildings

The art of having control

An ideal climate for people

Whether we work there or live there, we want a room that meets our requirements and expectations of comfort. Building control systems are there to understand the different needs of an ideal environment. With intelligent technology you should be able to adjust all aspects that affect the welfare of the people in the room and apply it at the lowest possible energy and maintenance cost. This is exactly the case with technology from Priva Building Intelligence. We specialize, both nationally and internationally, in building control systems that are as well designed as they are reliable.

Priva is a leader in climate and process control, not only in the area of building control systems but also in greenhouse industry. Through the complete integration of all climate related aspects, we help you save on costs and create an optimal environment for man and plant. In this, the welfare of people and plants are always of fundamental importance. This is what Priva calls 'the art of having control'.

In this integral approach lies our strength. And at Priva, our knowledge of building control systems and climate control for horticulture is situated under one roof.

Experience in innovation

Priva Building Intelligence has a quarter of a century's experience in building control systems. Priva Building Intelligence Systems are used in offices and hospitals, in hotels and shops, and in conference centres and sports halls. This knowledge has been applied in many other countries. With clients, contractors, consultants and end-users, Priva Building Intelligence is known as an innovative company. The solutions offered by Priva Building Intelligence are continuously evolving in order to improve on control possibilities, flexibility, reliability, and especially maintenance and ease of use.

Technique for all

Technique is the foundation of building control systems (BMS). But BMS is never about technique alone. For the client it is the lowest cost across the entire lifespan of a building, in other words the total cost of ownership. For the end user, it is the freedom to be able to create a climate that is comfortable. The contractor wants a system that is flexible in its application; easily installed and that can communicate with any standard protocol due to its openness.

Priva Building Intelligence's strength lies in the fact that its systems – whether hardware or software – meet the demands of all these people.

Network of disciplines

The installation of an optimal building control system is a complex network of disciplines. It involves knowledge of building processes, experience in process control, insight into networks and the know-how of software

development. Within Priva Building Intelligence these facets are combined. Both the hardware as well as the software is developed in-house.

Total hardware and software

The technology is state of the art, based on internet technology. Systems are therefore quickly designed and built, easily maintained and always expandable at a later stage. The reliability has proven itself in practice. Priva Building Intelligence is also a leader in the area of openness. By making use of a standard protocol, such as BACnet, the systems are easily maintained, ensuring maximum freedom at the procurement stage of both new-build and future development. The solutions may vary, but the components are always the same: hardware and software developed by Priva.

Intelligent building

Priva Building Intelligence is the leading specialist in building control. A specialist that provides the benefits of integrating the internal environment, energy, lighting and sun blinds with sub-systems such as fire and

security. Priva systems are always transparent and future oriented. With solutions by Priva, you create buildings that almost seem to be thinking for themselves: justifiably intelligent buildings.

Co-operation with Priva Partners

A good product is one thing. Perfect installation is the work of Priva's Partners. Spread across the country, we have established a network of professional Priva-certified contractors, automatic control companies and system integrators. They know our hardware and software products inside out. Therefore Priva not only offers you maximum efficiency, but provides maximum safeguards in the quality and service of its installers.

Why choose Priva?

- Innovative technology for intelligent building control systems that leave nothing to chance.
- Choosing Priva is choosing more freedom and greater security.
- Quickly achieved, easily maintained, always expandable: typically Priva

Would you like more information?

In short, Priva is a professional and reliable partner. If you would like to know what we can do for you, call us to arrange a chat with one of our specialists.
